DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed August 3rd 2001 are not persuasive because of following reasons.

Applicant argued, "*In the parent application, claims 1-4 were rejected under 35 USC101*". This is not found persuasive. The claims 1-4 of the parent application are not the same as the claims 1-4 of the current application paper number 1. Claims 1-4 are therefore rejected by other reason set forth in this office action (Paper No. 4).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Klemba et al (5,651,068).

In reference to claim 1, Klemba discloses computer readable medium having stored therein a policy file for controlling cryptographic functions of an application program, the computer readable medium comprising:

An attribute portion that holds a plurality of cryptographic policy attributes, each cryptographic policy attribute representing (column 3 lines 1-3 and column 4 lines 1-5).

Art Unit: 2131

A cryptographic function (part 20 on Fig. 2);

A value portion that includes a plurality of attribute values each attribute value corresponding to a separate one of the cryptographic policy attributes and indicating to a policy filter whether an application program may employ the cryptographic policy represented by the attribute (column 6 lines 47-67).

A signature portion for verifying authenticity of the attribute portion and the value portion (claim 4).

3. Claims 2-4 are rejected as in rejection for claim 1 above.

Regarding claim 2, wherein the plurality of cryptographic policy attributes includes cryptographic capabilities of the application program in a country where the application program is said to be executed (part 12 Fig 2).

Regarding claim 3, wherein each of the attribute values is a data string, an integer number, or a truth expression, the truth expression including one of a true flag, a false flag, and a conditional flag (column 6 lines 58-67).

Regarding claim 4, wherein the signature portion includes a digital signature and a chain of certificates, the digital signature including a certificate indicative of the origin of the digital signature, and the chain of certificates is indicative of the validity of the digital signature (claim 4).
